3. Environment and recycling

German Pool is very conscious of environmental protection, and this also includes packaging materials. You can care for the environment by carefully segregating waste.

- The packaging is essential to protect the components whilst in transit. It is made from environmentally-friendly, re-usable corrugated cardboard. The plastic bags are made of recyclable polyethylene (PE).
- The plastic components of the appliance are marked with a material code so that they can be recycled at the end of their useful life. These valuable materials are 100 % recyclable, provided they are correctly segregated.

4. Safety instructions

Installation, initial operation and maintenance of this appliance must only be conducted by an authorised professional, who will then be responsible for adherence to applicable standards and installation regulations. We assume no liability for any damages caused by failure to observe these instructions.

- Do not use the appliance until it has been correctly installed and unless it is in perfect working order.
- The appliance is only suitable for domestic use and similar applications inside closed, frost-free rooms, and must only be used to heat incoming water from mains supply.
- The appliance must never be exposed to frost.
- The appliance must be earthed at all times.
- The minimal specific water resistance must not fall below the value stated on the label.
- The maximum water pressure must not exceed the value on the label.
- Before commissioning for the first time and each time the appliance is emptied (e.g. due to work on the plumbing system, if there is a risk of freezing or in case of maintenance), the appliance must be vented correctly in accordance with the instructions in this manual.
- Do not remove the front cover under any circumstances before switching off the mains electrical supply to the unit.
- Never make technical modifications, either to the appliance itself or the electrical leads and water pipes.
- Pay attention to the fact that water temperatures in excess of approx. 43 °C are perceived as hot, especially by children, and may cause a feeling of burning. Please note that the fittings and taps may be very hot when the appliance has been in use for some time.
- Water inlet temperature must not exceed 70 °C.
- In case of malfunction, disconnect the fuses immediately. In case of leaks, cut off the cold water supply instantly. Repairs must only be carried out by the customer service department or an authorised professional.
- This appliance must not be used by any person (including children) with limited physical, sensorial or mental abilities or failing experience and/or knowledge unless they are supervised by a person responsible for their safety or received instructions about how to use the appliance. Children should be supervised in order to make sure that they do not play with the appliance.

5. Description of appliance

The instantaneous water heater DSX is a microprocessor-controlled, pressure-resistant water heater for a decentralised water supply to one or more tap connections.

Its electronic control regulates the power consumption depending on the selected outlet temperature, the respective inlet temperature and the flow rate, thus reaching the set temperature exactly to the degree and keeping it constant in case of pressure fluctuations. The required outlet temperature can be entered on a keypad within a range between 20 °C and 60 °C and can be read off the digital display.

The maximum inlet temperature can be up to 70 °C so that operation in connection with solar heating systems is possible.

7. Dimensions

8. Installation

The following regulations must be observed:

- Installation must comply with all statutory regulations, as well as those of the local electricity and water supply companies.
- The specifications on the rating plate
- Technical specifications

Installation site

- Appliance must only be installed in frost-free rooms. Never expose appliance to frost.
- The Appliance must be wall mounted and has to be installed with water connectors downward.
- The appliance complies with protection type IP25 and may therefore be installed in protection zone 1 according to VDE 0100 part 701.
- In order to avoid thermal losses, the distance between the instantaneous water heater and the tapping point should be as small as possible.
- For maintenance work, a shut-off valve should be installed in the supply line. The appliance must be accessible for maintenance work.
- Copper or steel connecting pipes may be used. Plastic pipes may only be used if they conform to DIN 16893, Series 2. The hot water pipes must be thermally insulated.
- The specific resistance of the water must be at least 1100 Ω cm at 15°C. The specific resistance can be asked for with your water distribution company.

Installing the wall bracket

If you install the instantaneous water heater DSX instead of a conventional instantaneous water heater, there is generally no need to drill holes for the wall holder. In this case, you only need to screw in the double nipples (15) as described in 2. and to secure the wall bracket.

1. Thoroughly rinse the water supply pipes before installation to remove soiling from the pipes.
2. Using a 12 mm hexagon socket screw key, screw the screw-in nipples into the wall connections. After tightening, the double nipples must protrude by 12 mm.

8. Installation

3. Hold the included mounting template on the wall and align it so that the holes in the template fit over the connections. Mark the drill holes according to the template and drill them using a 6 mm drill. Insert the included dowels and screw in the wall bracket.

4. Offset tiling or uneven surfaces can be compensated by up to 30 mm with the aid of the spacers supplied. The spacers are fitted between the wall and wall bracket.

Installing connection pieces

1. As shown in the illustration, screw the cold water connection piece (12) with the union nut and the 1/2" seal onto the cold water connection.
2. Screw the hot water connection piece (1) with the union nut and the 1/2" seal onto the hot water connection.

Installing the appliance

1. To open the appliance hood, take off the faceplate and unscrew the main hood screw.
 - When replacing an appliance, the electrical power supply cable may be connected in the upper part. Only in such case, press against the prepared breaking point (S) with a blunt implement (e.g. screwdriver).
 - Slit the grommet (14) to match the cable size. The opening in the grommet should be slightly smaller than the cross-section of the cable in order to ensure optimum protection against water. Fit the grommet into the opening. The protection grommet must be used!
 - Strip the cable roughly 6 cm above the point where it emerges from the wall. Hold the prepared appliance so that you can route the cable into the grommet with the other hand.
2. Place the appliance on the heater bracket so that the threaded rod of the wall bracket fits in the provided hole of the appliance. If necessary, slight corrections are possible by carefully bending the threaded rod of the wall bracket. However, it must be possible to screw on the water connection pipes of the appliance without applying force.
3. Screw the two 3/8" union nuts of the appliance's water connection pipes, each with the 3/8" seal, onto the fittings.
4. Screw the plastic knurled nut onto the threaded rod of the wall bracket.
5. Open the water supply line to the unit and slowly open the shut-off valve (12c) in the cold water connection piece (12) (Pos.I). Check all connections for leaks.
6. Next, open and close the hot water tapping valve several times until no more air emerges from the line and all air has been eliminated from the instantaneous water heater.

9. Direct connection

For direct connection, the two 1/2" screw-in nipples (15) and the 1/2" seals must be screwed into the 1/2" union nuts of the hot-water (1) and cold-water (12) connectors. The two 1/2" caps of the side outlets of the hot-water and cold-water connectors must be removed and screwed onto the open end of the screw-in nipples. The hot-water and cold-water connectors must then be screwed into the 3/8" union nut of the appliance and delivery pipe, together with the 3/8" seals.

For direct connection, it is advisable to mount the appliance at a distance as illustrated alongside, using the spacer sleeves supplied. It should therefore be noted that the two fixing holes near the lower pipe connections are also used.

The flared end of the pipes must be screwed into the 1/2" side outlets of the hot-water and cold-water connectors with 1/2" union nuts and 1/2" seals. The holes required for the pipes must then be broken out of the housing with the aid of a blunt implement.

**In case of direct connection please note:
Put the strainer into the cold water connection!**

10. Electrical connection (only by a specialist)

Wiring diagram

- 1 Electronic circuitry
- 2 Heating element
- 3 Safety pressure switch and Safety thermal cut-out
- 4 Terminal strip

Please observe:

- The installation must comply with current IEC or national local regulations or any particular regulations, specified by the local electricity supply company
- Observe the rating plate and technical specifications
- The unit must be earthed!

Structural prerequisites

- The appliance must be installed via a permanent connection. Heater must be earthed! In case of electrical connection from the upper part, a maximum cable size of 10 mm² must be observed.
- The electric wiring should not be injured. After mounting, the wiring must not be direct accessible.
- An all-pole disconnecting device (e.g. via fuses) with a contact opening width of at least 3 mm per pole should be provided at the installation end.
- To protect the appliance, a fuse element must be fitted with a tripping current commensurate with the nominal current of the appliance.

Load shedding relay

If further three-phase appliances are connected, a load shedding relay (82250) can be connected to phase conductor L₂. A special operating mode must be selected on the appliance for this purpose.

LCD	Description
0	Normal operation, manufacturer's setting
1	Operation with normal load shedding relay
2	Operation with sensitive load shedding relay

To change the operating mode, call up the setup menu first:

Press the setup key  and the service key  simultaneously for at least 3 seconds, the display confirms by "Setup".

After pressing the arrow key  seven times, you reach the setup menu for the load shedding. The setup mode of the parameter "load shedding" is activated by pressing the setup key , the display is flashing. You can now select between mode "0", "1" and "2" with the aid of arrow key  and . A new pressing on the setup key  will store the new parameter value.

You will get back to the normal display by pressing the service key .

Operating mode 1 must be selected first, thus to check the correct operation of the load shedding relay at low appliance output (35 degree celsius setpoint and low water flow rate). Mode "2" must be selected if the load shedding relay flickers.

Electrical connection from below

Check that the power supply is switched off prior to electrical connection.

1. Strip approximately 6 cm off the connecting cable above the wall outlet. With the smaller opening ahead, slide the water splash protection sleeve (13) over the connecting cable so that the sleeve is flush with the wall. This prevents any leaking water from coming into contact with the electrical leads. It must not become damaged! The protection sleeve must be used!
2. Open the control panel (8) rightwards.
3. Insulate the cables and plug them in the connecting terminals according to the wiring diagram. The appliance must be earthed.
4. Pull the protective sleeve over the connecting cables until the sleeve fits perfectly in

10. Electrical connection (only by a specialist)

the recess of the intermediate panel. Adjust the water splash protection sleeve as illustrated. Reinsert the front part of the intermediate panel. Reinsert the control panel and lock it on the heating element.

- Place the hood on the appliance and screw in the fastening screw. After that you can reinsert the faceplate.

Note:

If necessary, the connecting terminal can be displaced to the upper part of the appliance. If you want to do so, please follow the instructions in the next chapter.

Electrical connection from above

Check that the power supply is switched off prior to electrical connection.

- Open the prepared breaking point (S) in the upper part of the appliance by pressing with a blunt implement (e.g. screwdriver).
- Slit the grommet (14) to match the cable size. The opening in the grommet should be slightly smaller than the cross-section of the cable in order to ensure optimum protection against water. Fit the grommet into the opening. The protection grommet must be used!
- Strip the cable roughly 6 cm above the point where it emerges from the wall. Hold the prepared appliance so that you can route the cable into the grommet with the other hand.
- Place the appliance on the heater bracket (7) so that the threaded rod of the wall bracket fits in the provided hole of the appliance.
- Unscrew the fastening screw of the connecting terminal. Displace the connecting terminal to the upper foot. Affix the connecting terminal again.
- Insulate the cables and plug them in the connecting terminals according to the wiring diagram. The appliance must be earthed.
- Place the hood on the appliance and screw in the fastening screw. After that you can reinsert the faceplate.

11. Initial operation

Multiple Power System:

The rated capacity (max. power consumption) is 27 kW/400V and can be changed internally to 24 kW, 21 kW or 18 kW.

1. Before making the electrical connection, fill the mains and the appliance with water by carefully opening and closing the hot water tap in order to vent completely. After every draining (e.g. after work on the plumbing system or following repairs to the appliance), the heater must be re-vented in this way before starting it up again.

Note "Selection of power rating"

(only by authorised specialist, otherwise lapse of guarantee). Upon first connection of the appliance to the supply voltage, select the maximum power rating.

Only after having set the power rating, the heater provides its standard operation mode. The maximum allowable power rating at installation site depends on the local situation. It is imperative to observe all data shown in the table "Technical specifications", in particular the required cable size and fuse protection for the electrical connection. Moreover, the electrical installation must comply with the statutory regulations of the respective country and those of the local electricity supply company (Germany: DIN VDE 0100).

2. Switch on the power supply to the appliance. The digital display on the appliance must light up.
3. When switching on the supply voltage for the first time, the value "18" flashes in the display. If not, please carefully read the below note "Reinstallation".
4. Select the maximum allowable power rating depending on the local situation via the up ▲ and down ▼ arrow keys (18 kW, 21 kW, 24 kW or 27 kW).
5. Press setup key Ⓢ to confirm the setting. The appliance starts operating.
6. Mark the set power rating on the rating plate.
7. After having set the maximum allowable power rating, the heating element will be activated after approx. 30 sec of water flow.
8. Open the hot water tap. Check the function of the appliance.
9. Explain the user how the instantaneous water heater works and hand over this manual.
10. Fill in the guarantee registration card and send it to the German Pool Customer Service Centre (see chapter "Trouble shooting and service").

Note "Reinstallation"

In case the appliance will be commissioned again under different installation conditions than during its initial operation, it may be necessary to adapt the maximum power rating.

A temporary short-circuit of the two pins, e.g. with a screwdriver acc. to EN 60900 (see figure), will reset all heater parameters to works setting and lock the heating. Value "18" flashes in the display until the maximum power rating has been selected. This condition will maintain when activating and deactivating the supply voltage.

Lock level

The operating mode of the appliance can be restricted.

Activation of the Lock level:

1. Select required level of Lock level via the setup menu (see chapter "How to use, Setup menu")
2. Disconnect the appliance from the power supply (e.g. by switching off the fuses)
3. Insert the jumper on the power electronics (see picture)
4. Put the appliance into operation again

Deactivation of the Lock level:

1. Disconnect the appliance from the power supply (e.g. by switching off the fuses)
2. Remove jumper
3. Put the appliance into operation again

12. Cleaning and maintenance

- Plastic surfaces and fittings should only be wiped with a damp cloth. Never use abrasive cleaners or solvents.
- For a good water supply, the outlet fittings (jet regulators and shower heads) should be unscrewed and cleaned at regular intervals. Every three years, the electrical and plumbing components should be inspected by an authorised professional in order to ensure proper functioning and operational safety at all times.

13. How to use

As soon as you open the hot water tap, the instantaneous water heater switches on automatically. When the tap is closed, the appliance automatically switches off.

Temperature setting

- You can set the required temperature gradually to a lower or higher value with the arrow keys ▲ and ▼. The temperature changes by 1 °C, in the convenience zone between 35 °C and 42 °C even by 0.5 °C, if key is pressed shortly one time. Pressing a key for a longer time changes the temperature continuously. You can select the outlet temperature from 20 °C to 60 °C.

The display confirms the temperature changes by "warmer" respectively "colder".

Note: If temperature is set below 20 °C with arrow key ▼ the display shows "--" and the appliance switches off the heating function.

Set temperature 溫度設定	
▼ -1 °C	▲ +1 °C
Convenience zone 35,0..42,0 °C 方便選擇範圍	
▼ -0,5 °C	▲ +0,5 °C

Temperature limitation

The instantaneous water heater DSX is equipped with an optional temperature limiting function. This scalding protection is deactivated in the works setting.

- Switch on: select the limit temperature with arrow keys ▲ and ▼, then press service key ⏏ and arrow key ▲ simultaneously for at least 3 sec. The display briefly confirms the activation by "temp protection enabled".

After activation of the scalding protection it is impossible to select a higher temperature.

- Switch off: press service key ⏏ and arrow key ▼ simultaneously for at least 3 sec. The display briefly confirms the deactivation by "temp protection off".

Reset to works setting

All factory settings can be recalled:

- Press setup key ⏏, the display now counts backwards from "10" to "00" in second intervals. The appliance is reset at value "00" – if you stop pressing the key too early, the process will be canceled.

How to save energy

Set the exact temperature you need on the appliance and open the hot water tap. Once you feel that the water is too hot, do not add any cold water and, instead, enter a lower temperature on the appliance. If you were to add cold water, the water already heated would cool down again and valuable energy would be wasted. Moreover, the cold water added in the tap is not covered by the control range of the electronic circuitry, with the result that temperature constancy is no longer guaranteed when using several taps at once.

13. How to use

Power limit

If the full output of the instantaneous water heater DSX does not suffice to heat the tapped quantity of water, the control valve automatically reduces the flow rate so that the set temperature is reached.

Operation with solar systems

When operating with solar systems, e.g. an automatic mixing tap must ensure that the inlet temperature does not exceed 70 °C.

If the inlet temperature is too high as the result of the above reason, the appliance is not providing any output, and the display shows "inlet temp too high".

Venting after maintenance work

The instantaneous water heater DSX features an automatic air bubble protection to prevent it from inadvertently running dry. Nevertheless, the appliance must be vented before using it for the first time. Each time the appliance is emptied (e.g. after work on the plumbing system, if there is a risk of frost or following repair work), the appliance must be re-vented before it is used again.

1. Disconnect the instantaneous water heater from the mains by disactivating the fuses.
2. Unscrew the jet regulator on the outlet fitting and open the cold water tap valve to rinse out the water pipe and avoid contaminating the appliance or the jet regulator.
3. Open and close the hot water tap until no more air emerges from the pipe and all air has been eliminated from the water heater.
4. Only then should you re-connect the power supply to the instantaneous water heater and screw the jet regulator back in.

14. Maintenance work

Maintenance work must only be conducted by an authorised professional.

Cleaning and replacing the filter strainer

The cold water connection of the instantaneous water heater DSX is equipped with an integrated shut-off valve and a strainer. Soiling of the strainer may reduce the warm water output. Clean or replace the strainer as follows:

1. De-energize the instantaneous water heater by means of the house fuses and prevent inadvertent reactivation of them.
2. After opening the hood of the unit, close the shut-off valve (12c) in the cold water connection piece (position II).
3. Unscrew the screw plug (12b) from the cold water connection piece and take out the strainer (12a).
4. The strainer can now be cleaned or replaced.
5. After fitting of the strainer tighten the screw plug.
6. Slowly open the shut-off valve in the cold water connection piece (position I).
7. Vent the unit by carefully opening and closing the affiliated warm water tap valve several times until air no longer emerges from the pipe.
8. Fit the hood of the unit. Then reconnect the voltage to the house fuses.

15. Trouble-shooting and service

Repairs must only be carried out by authorised professionals.

If a fault in your appliance cannot be rectified with the aid of this table, please contact the Central Customer Service Department at GERMAN POOL. Please have the details of the typeplate at hand.

Your instantaneous water heater DSX was manufactured conscientiously and checked several times before delivery. Should malfunctions nevertheless occur, it is usually only due to a bagatelle. First attempt to switch the house fuses off and on again in order to reset the electronics. Next, try to remedy the problem with reference to the following table. In doing so, you will avoid unnecessary expense of customer service assistance.

Problem	Cause	Solution
Water stays cold, digital display does not light up	Master fuse tripped	Renew or activate fuse
Display flashes error symbol "screwdriver"	Control system has switched off	Switch fuse off and on. If "screwdriver" is still flashing contact customer service
Flow rate of hot water too weak	Outlet fitting dirty or calcified	Clean shower head, jet regulator or sieves
	Fine filter dirty or calcified	Let clean fine filter by customer service
Selected temperature is not reached	Water flow rate too high	(Re)activate motor-driven valve
	Cold water has been added via the tap	Tap hot water only; set temperature, check outlet temperature
LCD-display: "inlet temp too high"	Inlet temperature exceeding nominal temperature	Reduce inlet temperature
No response upon key press	Hood is not fitted properly	Refit the hood properly

如何节省能源

将热水器调校至所需温度, 然后开启热水器龙头。当感觉水温过热时, 不要加入冷水, 而应将温度调低。如加入冷水, 已加热的水会被冷却, 因而浪费能源。

再者, 如同时间开着多个冷水龙头, 新加入的冷水并不在电子加热系统的范围内, 水温的稳定性就无法控制。

13. 使用指示

电量限制

如 DSX 热水器的功率未能将热水器加热至所需温度(例如同时打开多个水龙头), 控制阀自动减低流量以达到设定温度。

与太阳能热水系统配合操作

可用热水器的全部功率将水加热, 注入浴缸内, 与太阳能热水系统配合操作, 必需确保入水水温不超过 70 °C。

如入水水温过高, 热水器不会提供热水, 显示屏显示“入水水温太高”。

保养工作后的排气程序

DSX 热水器备有自动气泡保护功能以防止非故意干烧情况。但每次热水器因水龙头工程或维修而需排出储水, 必需将热水器内空气排出, 然后再使用。

1. 关掉电源总开关。
2. 开启冷水龙头清洗水龙头以免污染热水器及水龙头配件。
3. 开启后再关闭热水开关, 直至管内不再排出空气, 使热水器内的空气完全排出。
4. 然后再连接电源。

14. 保养

必须由合格技师负责保养。

清洗及更换过滤器

DSX 热水器的冷水入水连接位配备有综合式关闭阀及过滤器, 过滤器藏有污垢会减低热水出水量, 必须定时清理或更换:

1. 先关掉电源。
2. 打开面盖后, 关掉冷水入水龙头内的关闭阀 (12 c)。
3. 拧松螺丝塞子 (12 b) 取出过滤器 (12 a)。
4. 过滤器 (12 a) 可以清洗或更换。
5. 放回过滤器后, 拧紧螺丝塞子。
6. 慢慢打开关闭阀。
7. 开关热水龙头数次将热水器内的空气排出。
8. 装回面盖, 再连接电源。

15. 故障处理检查要点

**必需由合格技师维修。
如参考列表未能处理有关问题，请联络德国宝客户服务部。**

- 來水電阻最少應為1100 Ωcm 15 °C。

安裝牆上掛碼

安裝此熱水器並不需要鑽牆裝上牆上掛碼,只需將杭牙如下列2.裝上便可。

1. 安裝前先清洗供水喉管。

2. 用12mm六角螺絲鎖匙將杭牙(15)旋入牆上接駁位置,旋妥杭牙後,杭牙應外露12mm。

3. 將附上的模板放在牆上適當位置以配合冷熱水位置。根據模板位置記下鑽孔位置,用6mm鑽咀鑽孔,放入合縫釘旋入掛碼(7)。

4. 可用附上的水平板碼調校牆面不平或傾斜情況達30mm,視乎程度,水平板碼應裝在牆壁與掛碼之間。

安裝接駁件

1. 如圖所示將緊固螺母密封圈與冷水進水配件連接。
2. 如圖所示將緊固螺母密封圈與熱水出水配件連接。

安裝熱水器

1. 旋鬆螺絲,打開面蓋。
 - 當更換熱水器時,電源線只可從熱水器上半部接駁,只在此情況下,以工具(例如螺絲批)按壓預先預備的穿破位置(S)。
 - 介開電線位密封膠蓋,介開的面積應略為少於電線的面積以確保最佳的防水性能,將密封膠蓋套入入線孔。
 - 從牆身電線出線位預留約6cm電線,將電線經密封膠蓋穿入熱水器內。
2. 將熱水器掛在掛接背板(7)上,如有需要可略為彎曲出水喉。
3. 將兩個3/8"緊固螺母及3/8"密封圈旋入進出入連接配件內。
4. 將膠螺母旋入牆上掛碼螺紋棒上。
5. 打開冷水供水喉,慢慢旋開閘掣(12c),查看有否滲漏。
6. 接着連續打開及關閉熱水龍頭數次將熱水器內的空氣排出。

9. 直接接駁

直接接駁,2個1/2" 杭牙及1/2"密封圈必需旋入冷熱水接駁件的1/2"緊固螺母內。取出冷熱水接駁件的1/2"密封帽,然後旋入杭牙的開放一端。將冷水及熱水的接連配件旋入熱水器機身及送水管的3/8"緊固螺母及3/8"密封圈。

直接接駁安裝,應利用附上的水平板,盡量垂直緊貼牆身安裝,可同時利用接駁喉管下半部的固定孔固定位置。

喉管的喇叭接頭必需連1/2"緊固螺母及1/2"密封圈旋入冷熱喉的1/2"接連配件。並在爐底部開孔讓冷熱水喉穿過。

直接接駁時請注意：將沙隔置於冷水入水接駁位!

10. 電線接駁(必須由合格技師負責)

線路圖

5. 按 **⊙** 鍵確定設定,熱水器開始操作。
6. 在標籤上註明設定的功率。
7. 設定最高容許功率後,發熱線會在水流開始30秒後啟動。
8. 開啟熱水龍頭,熱水器開始操作。
9. 測試熱水器性能,將使用說明交給客戶,並向客戶解釋熱水器怎樣操作。
10. 填妥隨機的保用登記卡, 並寄回德國寶客戶服務部 (詳情請參閱“故障處理檢查要點”)。

重新安裝說明

在不同的安裝情況下,初次安裝時可能需要修改最大功率。

暫時性的兩極短路(例如用符合EN60900的螺絲批如圖所示,會重新設定熱水器的參數。數值“18”會在顯示屏閃動直至選定最大功率。此情況會在啟動或關閉電源時維持。

鎖定限制操作程度

可以限制熱水器的操作模式

啟動鎖定程度:

1. 透過設定說明(參照第13項“如何使用,設定說明)選擇需要的鎖定程度。
2. 切斷電源(例如關掉電源開關制)。
3. 如圖示在電子組件裝上 跳線。
4. 重新操作熱水器。

關閉鎖定程度:

1. 切斷電源(例如關掉電源開關制)
2. 拆去 跳線
3. 重新操作熱水器

12. 清潔及保養

- 必須使用濕布清潔塑膠表面及配件, 切勿使用腐蝕性清潔劑或溶劑。
- 要供水系統運作良好,需定時清洗出水喉配件,每三年應由合格技師檢查熱水器、電源接駁及水喉配件以確保熱水器性能及操作安全。

13. 使用指示

開啟熱水龍頭,熱水器會自動開著,關掉熱水龍頭,熱水器會自動關掉。

如何節省能源

將熱水器調校至所需溫度,然後開啟熱水器龍頭。當感覺水溫過熱時,不要加入冷水,應將溫度調低。如加入冷水,已加熱的水會被冷卻,因而浪費能源。

再者,如同時間開著多個冷水龍頭,新加入的冷水並不在電子加熱系統的範圍內,水溫的穩定性就無法控制。

電量限制

如DSX熱水器的功率未能將熱水器加熱至所需溫度(例如同時打開多個水龍頭),控制閥自動減低流量以達至設定溫度

與太陽能熱水系統配合操作

你可用熱水器的全部功率將水加熱,注入浴缸內,與太陽能熱水系統配合操作,必需確保入水水溫不超過70 °C。

如入水水溫過高,熱水器不會提供熱水供應,顯示屏顯示“入水水溫太高”。

保養工作後的排氣程序

DSX熱水器備有自動氣泡保護功能以防止非故意乾燒情況。但每次熱水器因水喉工程或維修而需排出儲水,必需將熱水器內空氣排出,然後再使用。

1. 關掉電源總掣。
2. 開啟冷水龍頭清洗水喉以免污染熱水器及水喉配件。
3. 開啓再關閉熱水掣，直至管內不再排出空氣，使熱水器內空氣完全排出。
4. 然後再接駁電源。

14. 保養

必須由合格技師負責保養。

清洗及更換沙隔

DSX熱水器的冷水入水接駁位配備有綜合式的閘制及沙隔,沙隔藏有污垢會減低熱水出水量,必須定時清理或更換:

1. 先關掉電源。
2. 打開面蓋後,關掉冷水入水喉內的閘制(12c)
3. 旋鬆螺絲塞子(12b)取出沙隔(12a)。
4. 沙隔(12a)可以清洗或更換。
5. 放回沙隔後,旋緊螺絲塞子。
6. 慢慢打開閘制。
7. 開關熱水龍頭數次將熱水器內的空氣排出。
8. 裝回面蓋,再接駁電源。

15. 故障處理檢查要點

**必需由合格技師維修。
如參考列表未能處理有關
問題,請聯絡德國寶客戶服
務部。**

本熱水器出廠前經多次反覆測試,如有故障,一般由小問題引致。

首先可嘗試重新開關電源重設電子設定。其次可參考以下列表措施解決問題,這樣可節省不必要的維修費用。
